

Traditional floor coating systems = waiting for drying and curing and guessing when ready. UV curable coatings cure instantly when exposed to high intensity ultraviolet light. In this 24h economy high traffic areas, like retail shops, airports, warehouses, hotels, hospitals, schools and more are in use continuously. Limited time is available for floor maintenance and closing the entire facility is costly and not necessary. Many leading brands offer UV curable coatings for wood, resilient, mineral and PU floors.

On-site UV puts you in control

Benefits of UV Floor curing

- Minimal down time
- Eco friendly coatings
- Industrial quality
- Low or no smell
- Floor is ready for immediate use
- Easy to clean
- UV curable coatings & UV curing equipment are worldwide available

The process in short*

Floor preparation as usual

Apply UV curable coating

UV light

Floor ready for immediate use

*Depending on the type of UV coating this procedure can differ

UV coating and equipment

On-site UV coatings and lacquers are available for mineral, wood and resilient floors. Coating companies all over the world develop their on-site UV coatings with the use of DecoRad UV equipment. Those cooperation's are necessary in order to guarantee floors with industrial quality properties. A proper how-to-operate & safety training is required and is provided by DecoRad Systems or one of our local partners. Fast growing markets in on-site UV curing are resilient floors and warehouse line-marking.

Strategic Alliance

Portable UV curing equipment

GEN6

Floormate GEN6

- Single phase electricity
- Motor driven
- 45 cm cure path
- 190 - 250V, 50 / 60 Hz
- Durable design, easy to operate
- Personal safety package included
- Flightcase included

The Floormate Gen6 is available in 3 variations:

- Gen6 in UV stainless steel
- Gen6 in UV aluminium
- Gen6 in LED aluminium
